

Web of Science Group and Open Science

Lund Online

Bob Green

Lale Yurtsever

October 2019

The Web of Science Group believes that open science/open research initiatives will help science be more efficient, improve research outcomes, and establish public confidence in science.

As a producer of publisher neutral resources, we are uniquely positioned to provide data and services to help institutions meet the goals of open science initiatives.

Our goal is to help institutions comply with funding mandates, measure impacts, and improve research efficiency.

Web of Science

Our grant to **Our Research** (Impactstory) has enabled information providers like us to present the various types of **Open Access**, for researchers, organisations and funders to analyse.

We have also incorporated **Kopernio's** full text capabilities (**OA and subscription**) into our platform, while keeping it a **free** browser extension for everyone.

A **Kopernio Institutional Dashboard** has been released, to assist then with full text access analysis.

Open Access

- All Open Access (385)
- DOAJ Gold (165)
- Other Gold (70)
- Bronze (80)
- Green Published (199)
- Green Accepted (77)

Web of Science

In 2015 we added the Emerging Sources Citation Index to be more inclusive. This year we clarified our journal selection process to make it more transparent.

We continue to add data curation, to ensure it is reliable & suitable for analysis.

Examples are: **Funder unification**; **Organisation unification**; and the new **Author Records**.

These enable funders, organisations and researchers to **analyse initiatives** and to **recognised for their efforts**.

Master Journal List

This year has seen the launch of a new version of the Master Journals List, providing easier access to information, via type ahead search boxes and a wide range of filters.

In addition there are **profiles** for each of the journals, containing general information, full details on **Open Access**, Peer Review process and links to the Journal Citation Reports for in depth information.

Match Manuscript has also been added.

Search Journal, ISSN or title word...

Journal Citation Reports (JCR)

This was redesigned in 2018 to provide a **Journal Profile** and promote **responsible metrics**, rather than just focusing on the Journal Impact Factor.

For transparency, we have provided **easy access to the data** that goes to make up the Journal Impact Factor.

We also provide trend metrics, country and organisation contributions.

Open Access profiles will be added later this year.

InCites Journal Citation Reports

InCites Benchmarking and Analytics

Open Access status available across the Web of Science platform has been added to InCites, with 12 indicators.

This makes it possible to analyse Open Access of all types: Gold or Bronze (free content at a publisher's website) and Green (e.g., author self-archived in a repository).

OA Filters and Visualization will be added this year. As will the OA data to the APIs.

The Data Citation Index

The Data Citation Index provides access to research data and software, stored in more than 380 repositories. It indexes citations to the data and **promotes correct citation of data**. We also include “**How to Cite This Data**” guidance and have a [whitepaper](#).

More than **95%** of the content is **openly accessible**.

We encourage anyone hosting a data repository to submit it for coverage, please send details to:-

Institute for Scientific Information (ISI)

ISI maintains the corpus of knowledge around research metrics, while preserving **its independent integrity**. Web of Science and related content, products, and services are built upon this.

ISI **disseminates** that knowledge internally through reports and recommendations, as well as externally through events, conferences, and publications.

ISI carries out research to sustain, extend, and improve the knowledge base. It also researches into **new bibliometric and analytical approaches**.

The Institute for Scientific Information (ISI) has been re-established to extend the work of Dr. Eugene Garfield

Editor Ethics

Publons

Our freely available platform has linked up with **Wiley** to put into place the first **automated, scalable transparent peer review workflow**.

The model...

- Is scalable and robust
- Requires minimal work from the publisher
- Is a simpler process for researchers
- Provides reviewers, authors and editors a **360° view of their contribution**
- Is GDPR compliant

Publons

The workflow gives authors the choice, it is easy to turn on, can adapt to single- and double-blind peer review with little change for editors and journal teams and has the potential to scale-up.

The publication in Publons shows a review navigation panel which provides links to each of the steps in the review process, from submission, through each round of review, to the final decision.

DOIs are provided for all stages and each person can be anonymous if they wish.

Transparent Peer Review

- **Popularity**
87% of authors chose transparent (sample of >2,000)
- **Reviewer Acceptances**
No meaningful differences.
- **Time to initial decision**
No meaningful differences on average (2 **quicker** by around 20 days).
- **Editor behaviour**
62% Editors declined to send manuscripts out, was 53% previously.

Publons Academy

- Learn the core competencies for peer review (10 modules, including **Ethics**) — developed with world renowned researchers and Nobel Prize winners;
- Practice writing reviews, benefit from exclusive guidance, access to resources and examples;
- Get endorsed from your very own Publons Academy supervisor;
- Receive an official graduation certificate certifying your skills as a master of peer review in your field;
- **Free** for individual researchers.
